INTEGRATED **NURSE CALL** SOLUTIONS

Making Your Work Day Easier

- Streamlined Workflows
 - Tools for Improving Patient Satisfaction and Safety
 - Wireless Communications Connects Patients and Staff
 - One Touch Staff-to-Staff Communications
 - Automated Roundings with Reminders
 - Measure Performance and Quality

Provider 790 Combines Leading Technology with Patient-Focused Benefits Extending to Every Team Member

Easy Communications

The issues facing acute care today – patient safety and satisfaction, workforce shortages, regulatory matters and technological challenges – significantly influence your patients’ hospital experience. Provider 790 Nurse Call addresses these issues with a communications system that supports your patients and staff. Wireless alerting and communications, real time staff locating, smart bed integration, LAN-based real-time dashboard, activity logging and reporting and intradepartmental workflows are just a few of its advanced features. And the system easily scales to any size hospital or campus.

“Automating workflows so I can spend more time with patients is what it’s about”

Advanced Technology for Clear and Direct Communications

Provider 790 Nurse Call harnesses digital Voice over IP (VoIP) technology to deliver clear communications between patients and staff throughout your facility.

- Patient/staff communication is everywhere you need it, including patient toilets and key staff areas such as utility rooms
- Multiple communication paths ensure patient calls are never blocked from being answered
- Real-time volume control adjusts for room acoustics and low-speaking patients

Alerts That Directly Connects Patients and Staff

Reaching new levels of patient care means connecting patients and staff throughout your facility. Patient calls and device alerts instantaneously route to the closest nurse station or to a caregiver’s mobile device for a verbal response, a room visit, or to request assistance from additional staff.

With Provider 790, no call goes unanswered. If a caregiver is tending to another patient and unable to respond, calls will automatically route to another team member.

- Staff remain mobile while still connected to their patients
- Productivity increases with less wasted time searching for staff or listening to disruptive overhead pages
- Fast, direct and informative staff-to-patient communication boosts patient satisfaction
- High priority alerts notify staff teams through group texts to mobile devices and automatic public address announcements: “Code call room 403, North Tower”

Easy Workflows

Provider 790 supports your mobile caregiver team by keeping them continuously connected to essential information and other team members. With ever-increasing demands on nurses, the tools available on Provider 790 keep clinicians productive, satisfied, and doing what they love: caring for their patients.

“Improving patient satisfaction is a direct result of the time-savings that Provider Nurse Call gives me”

Reaching Your Patient Safety Goals is Our Mission, Too

Avoiding the risk of patient fall 'never events', Provider 790's monitoring and alerting protects your patients and instantly notifies staff of changing conditions.

- Dome lights outside each room identifies fall risk patients
- Communication directly to the bathroom allows caregivers to reassure patients and remind them to wait for their caregiver
- Bed exit alarm simultaneously alerts multiple caregivers before a potential fall occurs

Minimize Alarm Fatigue with Real-Time Alerts

Critical and time-sensitive alerts from devices - such as ventilators, pulse ox, and infusion pumps - alert at the dome light outside the patient's room, the local nurse console, and directly to the caregiver's wireless device.

- Multiple alerting modes speed response to critical events while filtering out unnecessary alerts that lead to alarm fatigue
- Clinicians are directed to the patient room instead of searching for alarms
- When Provider Nurse Call actively monitors alarms, patient doors can remain closed for a quiet and healing environment

Streamlined Workflow with Team-Based Patient Rounding

Provider 790 automatically reminds caregivers of timed patient rounding or specific tasks such as pain assessment. Timely caregiver visits improve patient care and reduce patient fall risk.

- Touchscreen Terminals and Workflow Stations in the patient's room allow caregivers to set and acknowledge patient rounding
- If staff are busy with another patient, an expired rounding automatically notifies other team members
- Rounding is actively monitored and reports can be generated based on responses, individual patients, and more

Easy Installation, Configuration and Maintenance

Provider 790 is a networked solution for a nursing unit, a single building, or a multi-building campus. The system creates a unified solution linking multiple departments together including the Emergency Department, Medical Surgical units, LDRP, Ambulatory Surgery... and even Clinics.

“Real-time alerts to caregivers streamline their response”

Data Network Architecture for Flexible Call Routing

Ethernet technology is at the heart of Provider 790, allowing all nursing units and areas to work together.

- Networked Nurse Call architecture, including fiber connections for campus-wide Nurse Call, supports remote access to the entire system for troubleshooting, programming, and integrations
- Facility-wide architecture supports flexible call routing including decentralized operation (each unit answers its own patient calls), centralized operation (all patient calls route to a central area) and any combination in between
- A readily scalable network solution lets you easily add additional nursing units and areas as budgets and schedules allow

Reliable Solutions With a Low Total Cost of Ownership

Provider 790 system's safety and dependability is backed with Underwriters Laboratories "UL 1069" certification for Nurse Call Equipment while updates for software and integrations are included at no cost for the life of your system.

- The embedded architecture of Provider 790 does not use PCs or servers. Its 24/7 dedicated operating system is immune from potential virus attacks, hard drive crashes, or routine reboots
- Standardized category cable with RJ connectors reduces initial installation costs and simplifies service
- Built-in continuous supervision of all devices reports any problems directly to a technician's wireless device
- Remote system programming and management means issues are addressed quickly
